uplex powder coated with c	oat curing	1.			

Hot-dip galvanizing

Description

The support structure of the train is made of structural steel which is protected against corrosion by zinc coating, resulting in a very prolonged service life of the workout elements, or duplex powder coated with coat curing according to RAL to prevent corrosion. These structures are anchored to concrete footings. All other metallic elements are also zinc coated or duplex powder coated with coat curing according to RAL to prevent corrosion.

All other parts of the play unit are made from high quality HDPE plastic (high density coloured polyethylene, which is characterised by high colour stability, UV resistance but mainly safety as it doesn't break and therefore there is no danger of injury to children by sharp fragments). Crawl tunnels are made from fibreglass which is UV stable and it is characterised by high colour stability. All fastening material is galvanized or stainless steel.
