AH-04

## Finish

Material

Rod - PE

Duplex powder coated with coat curing Hot-dip galvanizing

#### Description

The support structure is made of structural steel which is protected against corrosion by zinc coating, resulting in a very prolonged service life of the workout elements or duplex powder coated with coat curing according to RAL to prevent corrosion. These structures are embedded in a concrete base. All other metallic elements are also zinc coated or duplex powder coated with coat curing according to RAL to prevent corrosion.

The slalom poles are made of polyethylene. All step boards are made of high quality Foamlite (high-pressure, which is characterised by high colour stability, UV resistance and mainly safety because it is rigid and there is no risk of injury caused by sharp broken fragments). All connecting material is zinc or stainless steel coated.

### Equipment

Wall, 12x Slalom Poles, Climbing A, Swing, Jumper
