Material

Metal units - structural steel Ropes and nets - polypropylene with a steel internal core Plastic units - polyamide Ball toSS88 - HDPE

Finish

Duplex powder coated with coat curing Hot-dip galvanizing

Description

The support structure of the climbing set is made of structural steel which is protected against corrosion by zinc coating, resulting in a very prolonged service life of the workout elements or duplex powder coated with coat curing according to RAL to prevent corrosion. All other metallic elements are also zinc coated or duplex powder coated with coat curing according to RAL to prevent corrosion.

The climbing net and the rope ladder are made using HERKULES material (16 mm thick ropes made from polypropylene with a steel internal core) and they are connected with plastic joints. The Ball toSS88 is made of high-quality HDPE (high-preSS88ure, full-color polyethylene, which is characterized by high color stability, resistance to scratching, UV resistance and especially safety because it is brittle and there is no risk of injury to children by sharp debris). All fasteners are galvanized or stainleSS88 steel.

Equipment

Swedish ladder, climbing net, Ball toSS8, FitneSS8 rack, Rope ladder.
