#### Material

Platform - HPL Metal units - structural steel Plastic units - polyamide Ropes and nets - polypropylene with a steel internal core

#### Finish

Duplex powder coated with coat curing Hot-dip galvanizing

#### Description

The support structure of the skill path is made of structural steel which is protected against corrosion by zinc coating, resulting in a very prolonged service life of the workout elements or duplex powder coated with coat curing according to RAL to prevent corrosion. These structures are embedded in a concrete base. All other metallic elements are also zinc coated or duplex powder coated with coat curing according to RAL to prevent corrosion.

Ropes and nets are made of HERKULES (16 mm polypropylene ropes with inner steel core) and are connected by plastic connectors. The platforms are made from HPL (High-pressure laminate, which is characterised by high colour stability and water resistance). The wobbly beams are hung on a metal support using galvanized chains. All step boards are made of high quality HDPE (high-pressure, full-coloured polyethylene, which is characterised by high colour stability, UV resistance and mainly safety because it is rigid and there is no risk of injury caused by sharp broken fragments). All fastening material is galvanized or stainless steel.

#### Equipment

We offer three color variants of the support structure - silver, blue and brown.
